

Prooflane Release Review Checklist

A second downloadable artifact that turns the terminal gate into a visible product object rather than a lone sentence in the identification.

01

Review complete

Confirm the document under review has the current draft, support, and packet context attached.

02

Redaction confirmed

Verify redactions are visible, intentional, and matched to the controlled release surface.

03

Release-ready or held

Check the terminal state. Either approve the packet for release review or keep it held for more work.

PLAIN-ENGLISH LAYER

Here, release review means the final go/no-go check before the document goes out. That explanation improves legibility without changing the locked Class 009 wording.

CHECKLIST PROMPTS

- Draft and support matched
- Redactions reviewed
- Citations or references checked inside review
- Terminal status recorded

Branded downloadable checklist distributed under the Prooflane mark as part of the document review, redaction, and release review materials family.
